DETAILED ACTION

THIS OFFICE ACTION IS IN RESPONSE TO APPLICANT'S AMENDMENT FILED 5/8/2007.

Status of Claims

- Claim 2 is canceled.
- Claims 1,3, and 6 were amended.
- Claims 1 and 3-13 are pending.

Response to Arguments

[1] Applicant's amendment filed 5/8/2007 regarding rejections under 35 U.S.C. 102 have been fully considered. Due to the amendment to the claims, the prior art fails to further anticipate. Accordingly, the Examiner has withdrawn all previous rejections over Geiger, US-6,240,602.

Allowable Subject Matter

[2] Claims 1 and 3-13 are allowed.

Reasons for Allowance

[3] The following is an examiner's statement of reasons for allowance. This application has been reviewed by the examiner and meets all formal and substantive (i.e., statutory) requirements and the language of the claims is enabled by, and finds adequate descriptive supported in the application disclosure as originally filed.

The primary reason for the allowance of the claims is the presence of limitations in the independent claims, which are not found in the prior art references. The examiner believes that the record of the prosecution as a whole makes clear his reasons for allowing a claim or claims. However, the examiner would like to point out one or more specific reasons and/or limitations that the prior art fails to disclose and/or make obvious. Hence, with regard to independent claims

Art Unit: 3677

1, 3, and 6, the prior art fails to disclose of a device to be attached to a threaded stud, wherein the device has only a single pawl (claims 1, 3, and 6); wherein the pawl has only a single pair of thread engaging sections thereon (claims 1, 3, and 6), said pair being formed at opposite sides of the thick section at a tip end of the thick section (claims 1, 3, and 6); and wherein the pawl has only a single pair of grooves thereon (claims 1 and 6), said grooves being formed adjacent to corresponding engaging sections of the pawl at the opposite sides of the thick section (claim 1 and 6); and wherein the opposite sides of the thick section of the pawl extending continuously from the grooves to the thin section are devoid of thread engaging sections and grooves corresponding to thread engaging sections (claim 1); and wherein after full insertion of a stud in the bore, a centerline of the pawl forms an angle substantially less than 90 degrees from the centerline of the pawl before insertion of a stud (claim 3). The prior art does not disclose a single pawl being used with such structural features as stated above and it would not be obvious to remove the multiple thread engaging sections and grooves of said prior art to have only one set as in claimed in the instant invention; or to remove a pawl from multiple pawls to just have one pawl.

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee, and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
